INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/US04/04790**Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement****1. Statement**

Novelty (N)	Claims <u>8-11, 19-22, and 30-33</u>	YES
	Claims <u>1-7, 12-18, and 23-29</u>	NO
Inventive Step (IS)	Claims <u>8-11, 19-22, and 30-33</u>	YES
	Claims <u>1-7, 12-18, and 23-29</u>	NO
Industrial Applicability (IA)	Claims <u>1-33</u>	YES
	Claims <u>NONE</u>	NO

2. Citations and Explanations (Rule 70.7)

1. Claims 1-7, 12-18, and 23-29 lack novelty under PCT Article 33(2) as being anticipated by AMRANI (WO 02/37693 A 2002/0083178, "Brothers").

Regarding claims 1, 12, and 23, Amrani discloses a method for evaluating packets and frames in a wireless communication system having a burst oriented channel, and a corresponding rate indicator channel (pg.5, ln.6-9), the method comprising; monitoring the rate indicator channel; and determinnig the presence of a packet on the rate indicator channel (pg.5, ln.6-19) based on a likelihood generated by a maximum likelihood decoder (pg.6, ln.9-16, pg.7, ln.15-17, and pg.11, ln.5-15). Similar objections apply to independent claims 12 and 23, which are corresponding system and base station claim of method claim 1.

Regarding claims 2-5, 13-16, and 24-27, Amrani discloses the additional features of those claims in pg.5, ln.6-19.

Regarding claims 6, 17, and 28, Amrani discloses "to analyse packets if they are detected on the rate indicator channel" (pg.5, ln.6-19).

Regarding claims 7, 18, and 29, Amrani refers to decoding of information on the burst oriented channel using informaton sent on the rate indicator channel (pg.5, ln.6-19).

2. Claims 8-11, 19-22, and 30-33 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest "comparing a sub-packet ID and a payload size of the packet to sub-packet IDs and payload sizes of previous packets and detecting energy on the burst oriented channel if there is no packet on the corresponding rate indicator channel and no packet was expected."

3. Claims 1-33 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.
